

Peck, kiss, peck, kiss
blue tit chat chits
nips nuts, tail up
head high up-flips.
Trill, trill, wings twitch
cat slinks, bird flits.

Bird (burd)

The bird in the picture is a blue tit.

Favourite Food

Some birds eat seeds and berries. Some eat other creatures like worms and insects. Others eat both.

Keeping Safe

Birds build their nests in places that are difficult for animals like cats to reach.

Sounds

They talk to each other with their songs. Some sounds are warning calls to other birds about a danger (cat about).

They sing to find a mate and to say "This patch is mine. Go and look for food somewhere else!"

Gardening For Birds

Grow a wide variety of plants which make berries, seeds, fruits and homes for insects and small creatures.

Put up nest boxes and enjoy watching them bringing food & feeding the young chicks.

Try This

Hold up your clenched hand. Close your eyes and listen to the birds singing. Count by popping up a finger for each different kind of bird song you hear.
